

## Recording the Humidity

Read the information on the **Humidity** and the **More About Humidity** pages.

*The humidity can vary quite a lot during the day. When it is hot and humid it can be quite uncomfortable. How humid it is may affect many things such as how quickly washing dries on the washing line. Take readings regularly through one day and see how the readings change.*

*You could use a wet and dry thermometer, a whirling hygrometer or a dial hair hygrometer. You may need to look on the **Humidity Page** for a weblink to a chart to help work out the humidity from your wet and dry readings.*

Date –

Time	Wet bulb temperature	Dry Bulb temperature	Humidity (%)
